Dynamics of household water demand 00	Data 00000	Analysis 00 000	Policy Implications

Length of Residency and Urban Water Use

M. Vanessa Viñoles Klaus Moeltner Shawn Stoddard

Presented at the 2015 Urban Water Demand Roundtable, Arizona State University, Feb. 9-10, 2015

Dynamics of household water demand 00	Data 00000	Analysis 00 000	

Dynamics of household water demand ●○	Data 00000	Analysis 00 000	
behavioral dynamics			

Existing evidence

Tucson (Agthe et al., 1988): monthly summer water usage increases by 265 gals. / HH for each year of residency

Dynamics of household water demand ●○	Data 00000	Analysis 00 000	
behavioral dynamics			

Existing evidence

Tucson (Agthe et al., 1988): monthly summer water usage increases by 265 gals. / HH for each year of residency

Phoenix (Harlan et al., 2009): HHs use 10% more water with every 5 years of residency

Dynamics of household water demand ●○	Data 00000	Analysis 00 000	
behavioral dynamics			

Existing evidence

Tucson (Agthe et al., 1988): monthly summer water usage increases by 265 gals. / HH for each year of residency

Phoenix (Harlan et al., 2009): HHs use 10% more water with every 5 years of residency

Reasons?

Dynamics of household water demand O•	Data 00000	Analysis oo ooo	
behavioral dynamics			

How can demand for outdoor irrigation change over time?

Learning rules and regulations (R)

Dynamics of household water demand ○●	Data 00000	Analysis 00 000	
behavioral dynamics			

How can demand for outdoor irrigation change over time?

Learning rules and regulations (**R**)

Adjustment to local social norms for watering, landscaping $({\sf N})$ moral suasion / moral licensing

Dynamics of household water demand O•	Data 00000	Analysis oo ooo	
behavioral dynamics			

How can demand for outdoor irrigation change over time?

Learning rules and regulations (**R**)

Adjustment to local social norms for watering, landscaping $({\sf N})$ moral suasion / moral licensing

Change in landscaping preferences, technology (LOR)

- own-use relates positively to (close) neighbors' use
- up 2% for every 1000 gallons used by others
- neighbors' effect robust to LOR
- disappears for *winter* use

Dynamics of household water demand 00	Data 00000	Analysis ○○ ○○●	
econometrics			

• weekly use increases by 0.3-0.5% with each month of residency

N:

- own-use relates positively to (close) neighbors' use
- up 2% for every 1000 gallons used by others
- neighbors' effect robust to LOR
- disappears for *winter* use

R:

- "rigidity penalty" of 55% for sticking to assigned days

Dynamics of household water demand 00	Data 00000	Analysis ○○ ○○●	
econometrics			

• weekly use increases by 0.3-0.5% with each month of residency

N:

- own-use relates positively to (close) neighbors' use
- up 2% for every 1000 gallons used by others
- neighbors' effect robust to LOR
- disappears for *winter* use

R:

- "rigidity penalty" of 55% for sticking to assigned days
- good news: this decreases over time (- 0.2% per month of residency)
